

Re-defining the Pain Landscape[®] to develop Personalized Analgesics[®]

“Phase II” Pain Landscape[®]

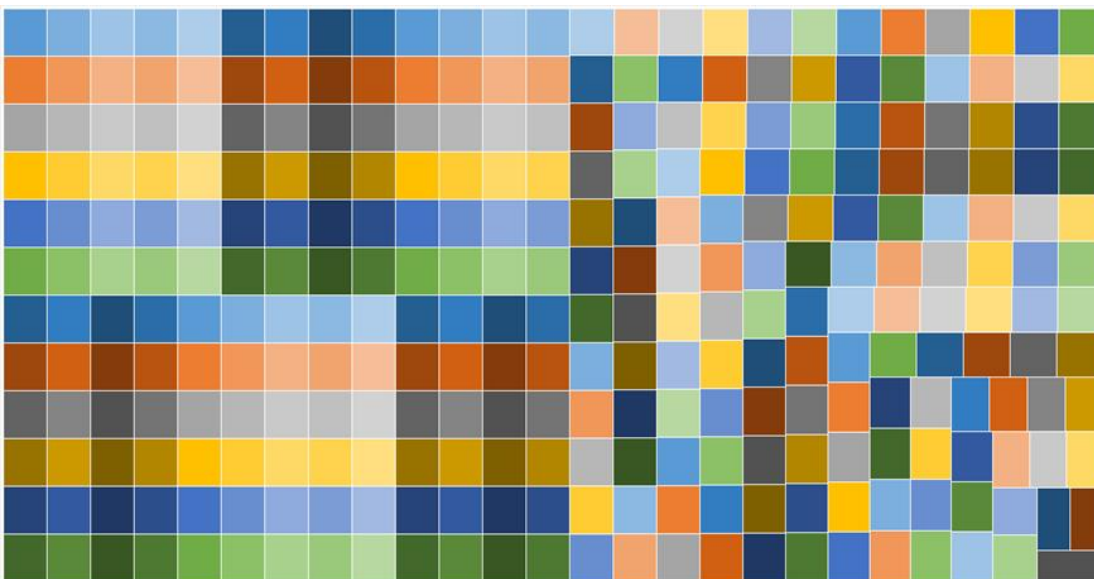

~10

Analgesic R&D has historically been largely restricted to ~10 conditions with regulatory path to approval – leading to low R&D success rates.

Data shown represents results of ClinTrials.gov search for industry

“Real World” Pain Landscape[®]

100's

Our research indicates the Pain Landscape[™] actually has 100 's conditions linked to chronic pain – including neglected rare conditions.

Data shown represents example for results of orphan database search for pain diseases . Each square represents a specific
